

**In the Specification:**

Please amend paragraph 0050 as follows:

The user indicates that only the current score should be displayed. As a result, from now on the filter ~~204~~ 206 will fetch all data-elements of the data stream with the right type, i.e. with identification 0000 and with name "Score" (See Table 1). Data-elements which do not have this type will be skipped by the filter. A graphical representation of the current score will be displayed on the display device 104. Note that the values of the series of incoming data-elements might be mutually different, e.g. "0-0", "0-1", "1-1", etcetera.
